5 STEPS OF CONCRETE SLAB REPLACEMENT

TAILGATE CHECKLIST

Please mark the box for each item as you complete it and fill in notes section as needed. For additional questions, please contact the Translab at (916) 227-7230.

STEP	1: REMOVING CONCRETE SLABS	
NIG	HT WORK	Notes:
	A. Prepare yourself and your staff for night work, if necessary	
	B. Provide adequate lighting for night work	
DE.	FERMINE EXACT LIMITS OF CONCRETE PAVEMENT REMOVAL	
	A. Locate and clearly mark or number slabs to be removed	
PRI	E-SAWING SLABS, ISOLATE THE AREA	
	 A. When planning to pre-cut concrete slabs: 1. Review the existing condition of the slabs to determine whether the pre-cut slab will hold up under traffic until it is replaced 2. Avoid keeping the pre-cut area open to traffic for more than 2 days, as this will cause more pavement deterioration 3. Slabs may have to be cut in the same shift they are replaced 	
	B. Core to determine saw cut depth and quantity	
	C. Outline of concrete to be removed shall be sawed full depth with a power driven saw	
	 D. Cut slab to sizes that can be lifted with selected equipment 1. Remove the concrete in rectangular sections to simplify concrete removal 2. Do not make notches or diagonal cuts in the pavement 3. Water residue from concrete cutting shall be vacuumed immediately 	
CO	NCRETE PAVEMENT REMOVAL	
_	A. Non-impact liftout method 1. Each slab shall be removed in one or more sections without disturbance or damage to the underlying base or the surrounding pavement that remains in place 2. Slabs can be pre-sawed prior to the night of removal and replacement 3. DO NOT drop concrete onto the existing base when lifting out	
	 B. Possible problems during removal 1. Slab is thicker than shown on the plans and pre-sawing did not reach full depth 2. Water is present under the slab when concrete is removed (Use shop vac to remove water) 3. Slabs shatter when lifted 4. Lift pins fail to hold PCC pavement section (redrill hole)

5 STEPS OF CONCRETE SLAB REPLACEMENT

TAILGATE CHECKLIST

Please mark the box for each item as you complete it and fill in notes section as needed. For additional questions, please contact the Translab at (916) 227-7230.

	P 4: PLACING CONCRETE
CO	DNCRETE ARRIVES ON-SITE
	A. Check temperature
	B. Watch for consistency of concrete, how long is the material workable, what type of slump does it have, etc.
	C. Watch for concrete balls coming down the chute and remove them
	D. Ensure that the vibrator keeps up with the concrete placement
	E. Ensure that final finishing is keeping up with concrete placement
CO	DICRETE TESTING
	A. Measure in-place temperature of the new concrete slab
PO	OTENTIAL ISSUES
_	Check temperature of discharging concrete from ready mix truck to ensure it doesn't set faster than it can be finished B. Low concrete slumps 1. Concrete should be delivered to the job with a slump specified by the
	approved mix design (the average is 102 to 204 mm or 4 to 8 in) 2. Too low a slump can cause difficulty in placing and finishing 3. Do not add water to adjust slump. A type F chemical add mixture, or super plasticizer, may be added to adjust slump
STEF	P 5: OPENING LANES TO TRAFFIC
CU	URING CONCRETE SLABS
	A. Apply curing compound after brooming
	B. Cover slabs with visquine or insulated blanket (cold weather)
PR	
	ROTECTING NEWLY PLACED SLABS
_	A. Protect slabs so that vehicles will not drive on them
_	A. Protect slabs so that vehicles will not drive on them B. Place "WET CONCRETE" signs on barricades. It is also recommended to
